Profile:

I possess a diverse range of skills that enable me to create dynamic and scalable web applications. While I specialize in using modern front-end tools like React and Vue, I also have a strong understanding of databases and back-end technologies. In particular, I have extensive experience with Node.js, which allows me to create fast and reliable applications that meet the needs of clients and end-users alike. By leveraging my expertise in JavaScript across the entire tech stack, I work to build seamless and efficient applications that are user-friendly and responsive.

Projects

[10thWorldServers](#): A SaaS product that pulls in data using Azure Functions into a GatsbyJS front end.

[GSI](#): Germ Science Investigation is a gamified learning experience built around teaching people to be safe during a pandemic.

[IP-Address-Tracker](#): Making use of leaflet and a geolocation API users can use the search bar feature to reveal information about an ip address or domain name.

Previous Work Experience

[PriceSpider](#) May 2022 - Present

Worked as part of the internal tools team and built applications that improved the efficiency of various parts of the company. Utilized a mix of languages, frameworks, and cloud services to create solutions to problems such as data-acquisition, confirmation of matched data, and issues related to interfacing with a large amount of data.

[Jensen + Partners](#) March 2021 - April 2021

I was brought on to update/upgrade their wordpress website as an administrator and programmer and was responsible for reviewing the existing codebase along with correcting problems with the performance of their site along with improving SEO and assessing any other issues. Addressed security concerns and corrected vulnerabilities.

[LOCI](#) May 2021 - May 2022

LOCI is a technology company that creates SaaS products which streamline and gamify safety training. I currently work here as a React developer on their game engine core, administrative website, and SaaS products. I work with serverless backend technologies to bring live data into feature rich front-ends.

Education

Frontend Masters – Javascript from Fundamentals to Functional v2 – *Certificate*

Penn LPS Coding Bootcamp, Philadelphia — *Certificate*

June 2019 - September 2019

Rigorous training in the latest technologies used in the field such as React, NodeJS, MongoDB, and others. Collaborated with other students on projects and other assignments, gained a reputation as a valued member of the class.
