Web Projects

[Class Tracker](#) - A MERN stack application that helps players to keep track of their in-game items in WoW classic.

[Memory Game](#) - Front-end project using React. User clicks different images trying not to click the same one twice.

[Google Books Search](#) - React app that uses Google Books API to retrieve information on a user's search. React on the front end with mongodb on the back-end for storing the results of the search. Users can search for and save books to a database.

[Word Guess](#) - CLI based word guessing game similar to hangman created with NodeJS and modular javascript.

[Code Pacer](#) -

- Developed the user facing components using React.
- Worked with a seasoned developer to create a self-pacing tool for people interested in learning to code.
- Became familiar with Agile methodology and Kanban process.
